

Detecting Business strategies based on patents

Frédéric Caillaud
Licensing & business director
L'Oréal R&D

IC6 Paris

Patent as an early innovation indicator

- Old Paradigm

- Micro vs macro
- <50 vs 50 000 patents
- 60M patents/10 M invention

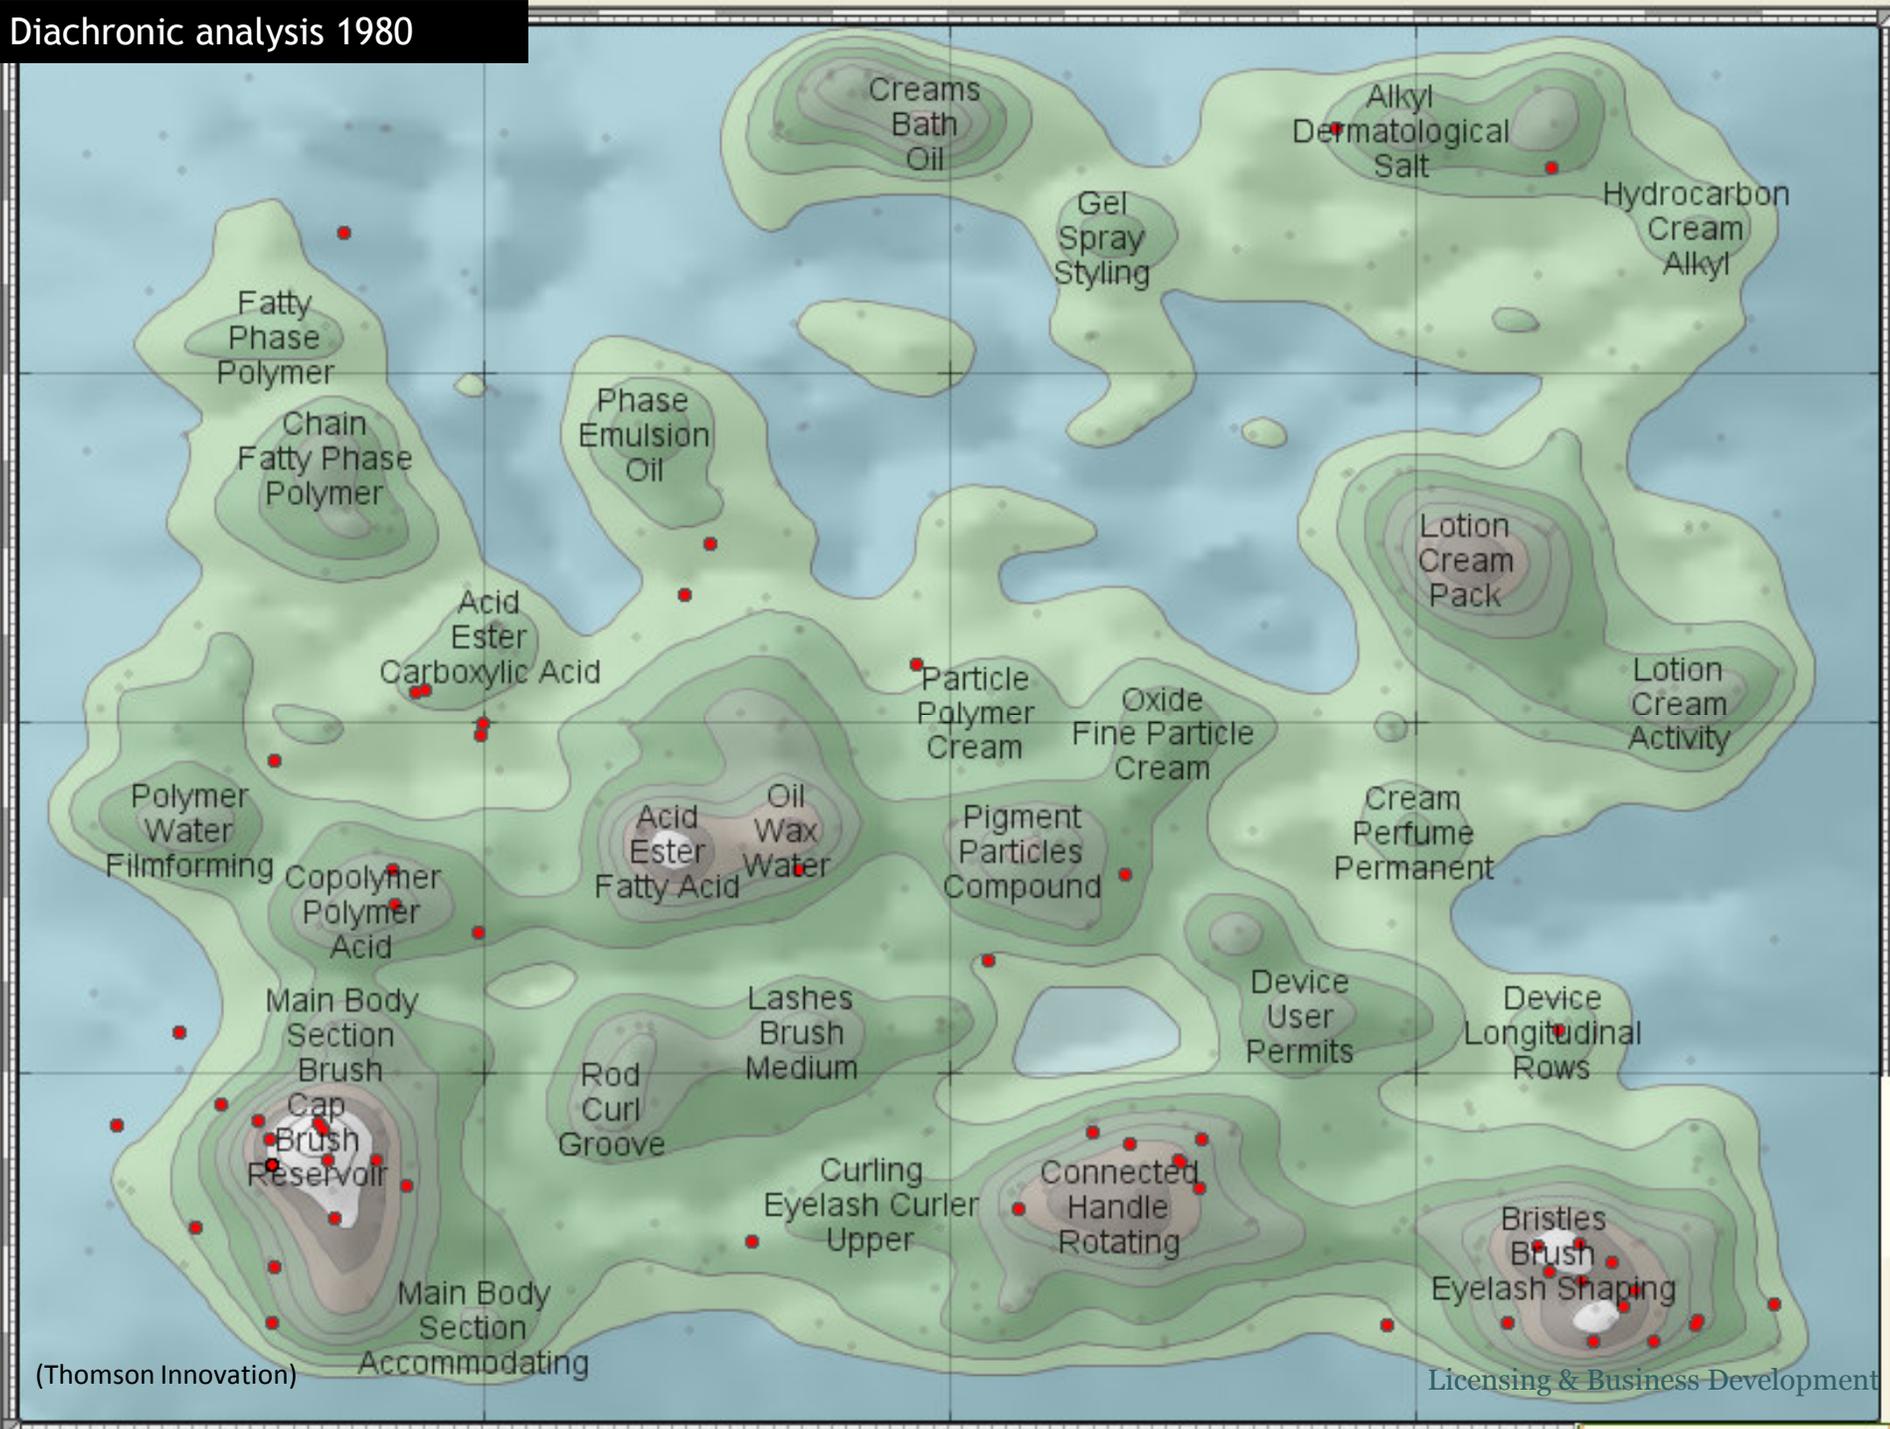

➔ Limited understanding of patent environnement

- New paradigm

- Analysing the past to predict the future ?
- « Flat » patent world :
 - Text mining, clustering, landscaping

➔ **Innovation space navigator**

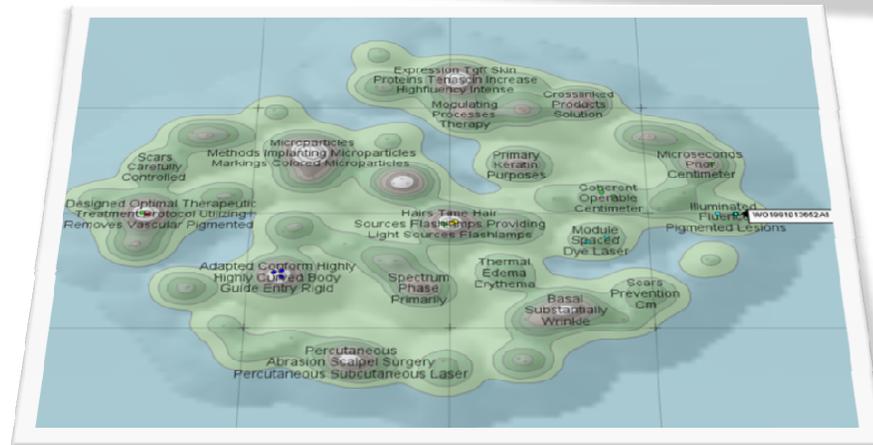

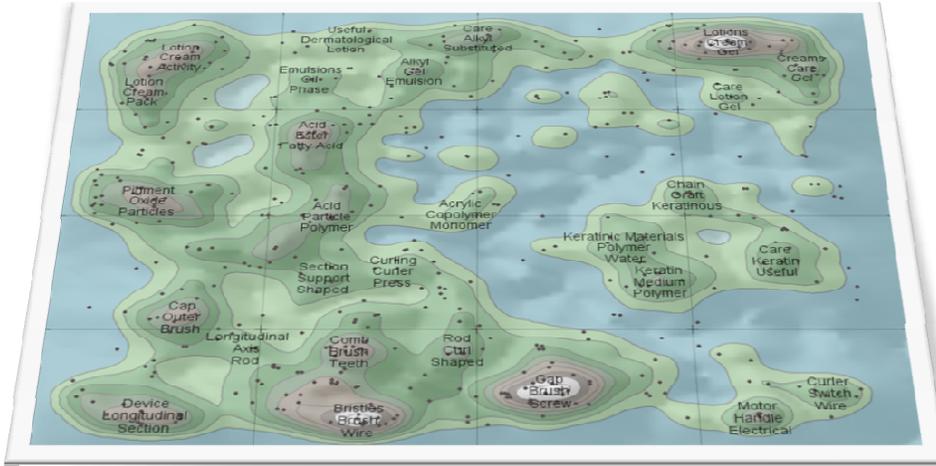

Diachronic analysis 1980

Licensing & Business Development

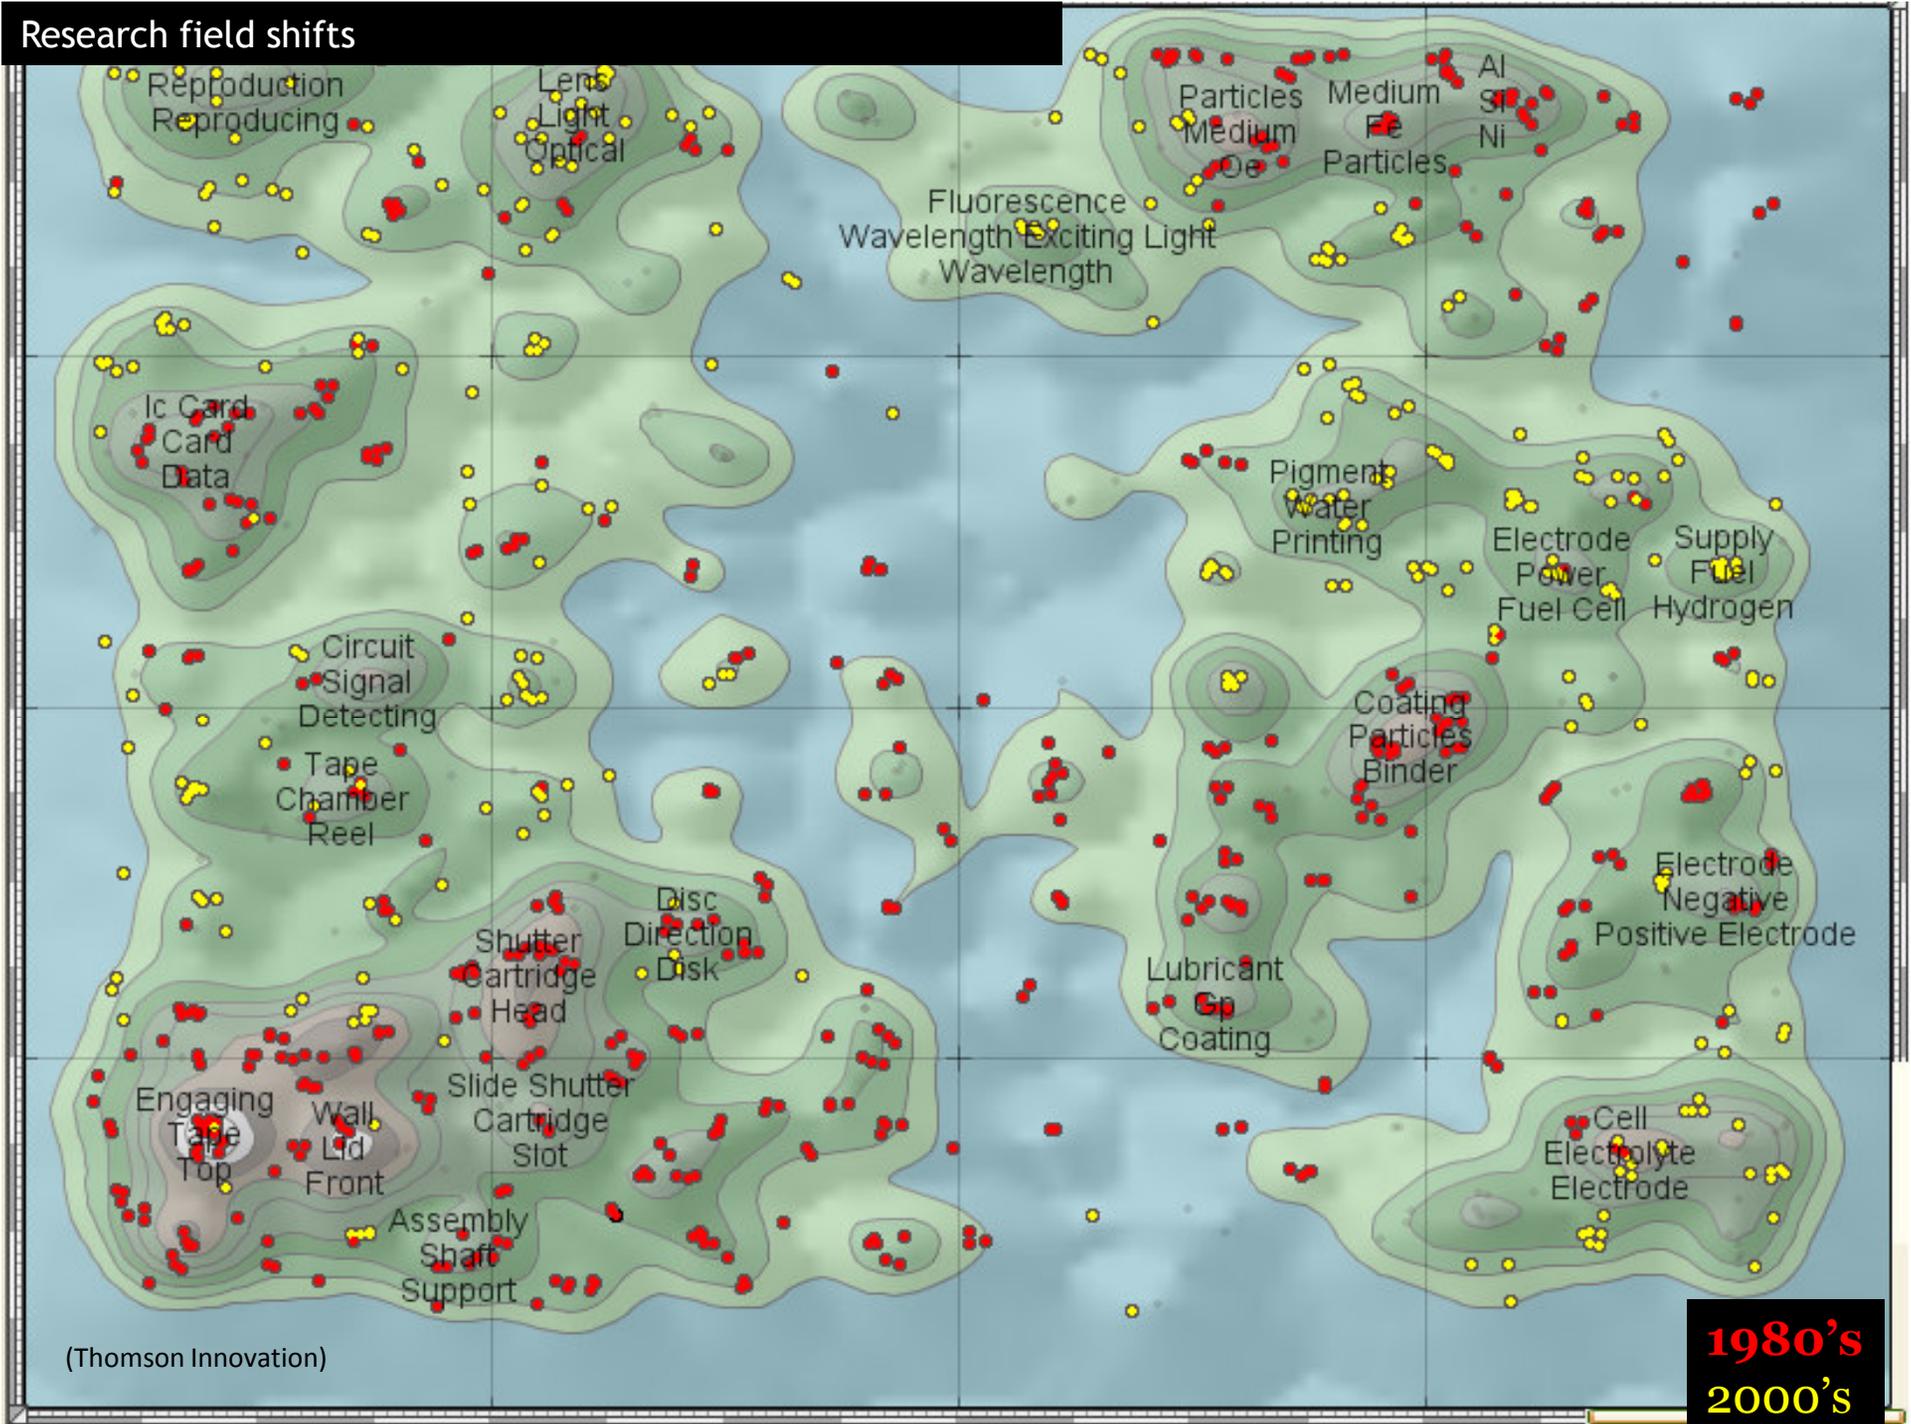

INNOVATION TOMOGRAPHIES

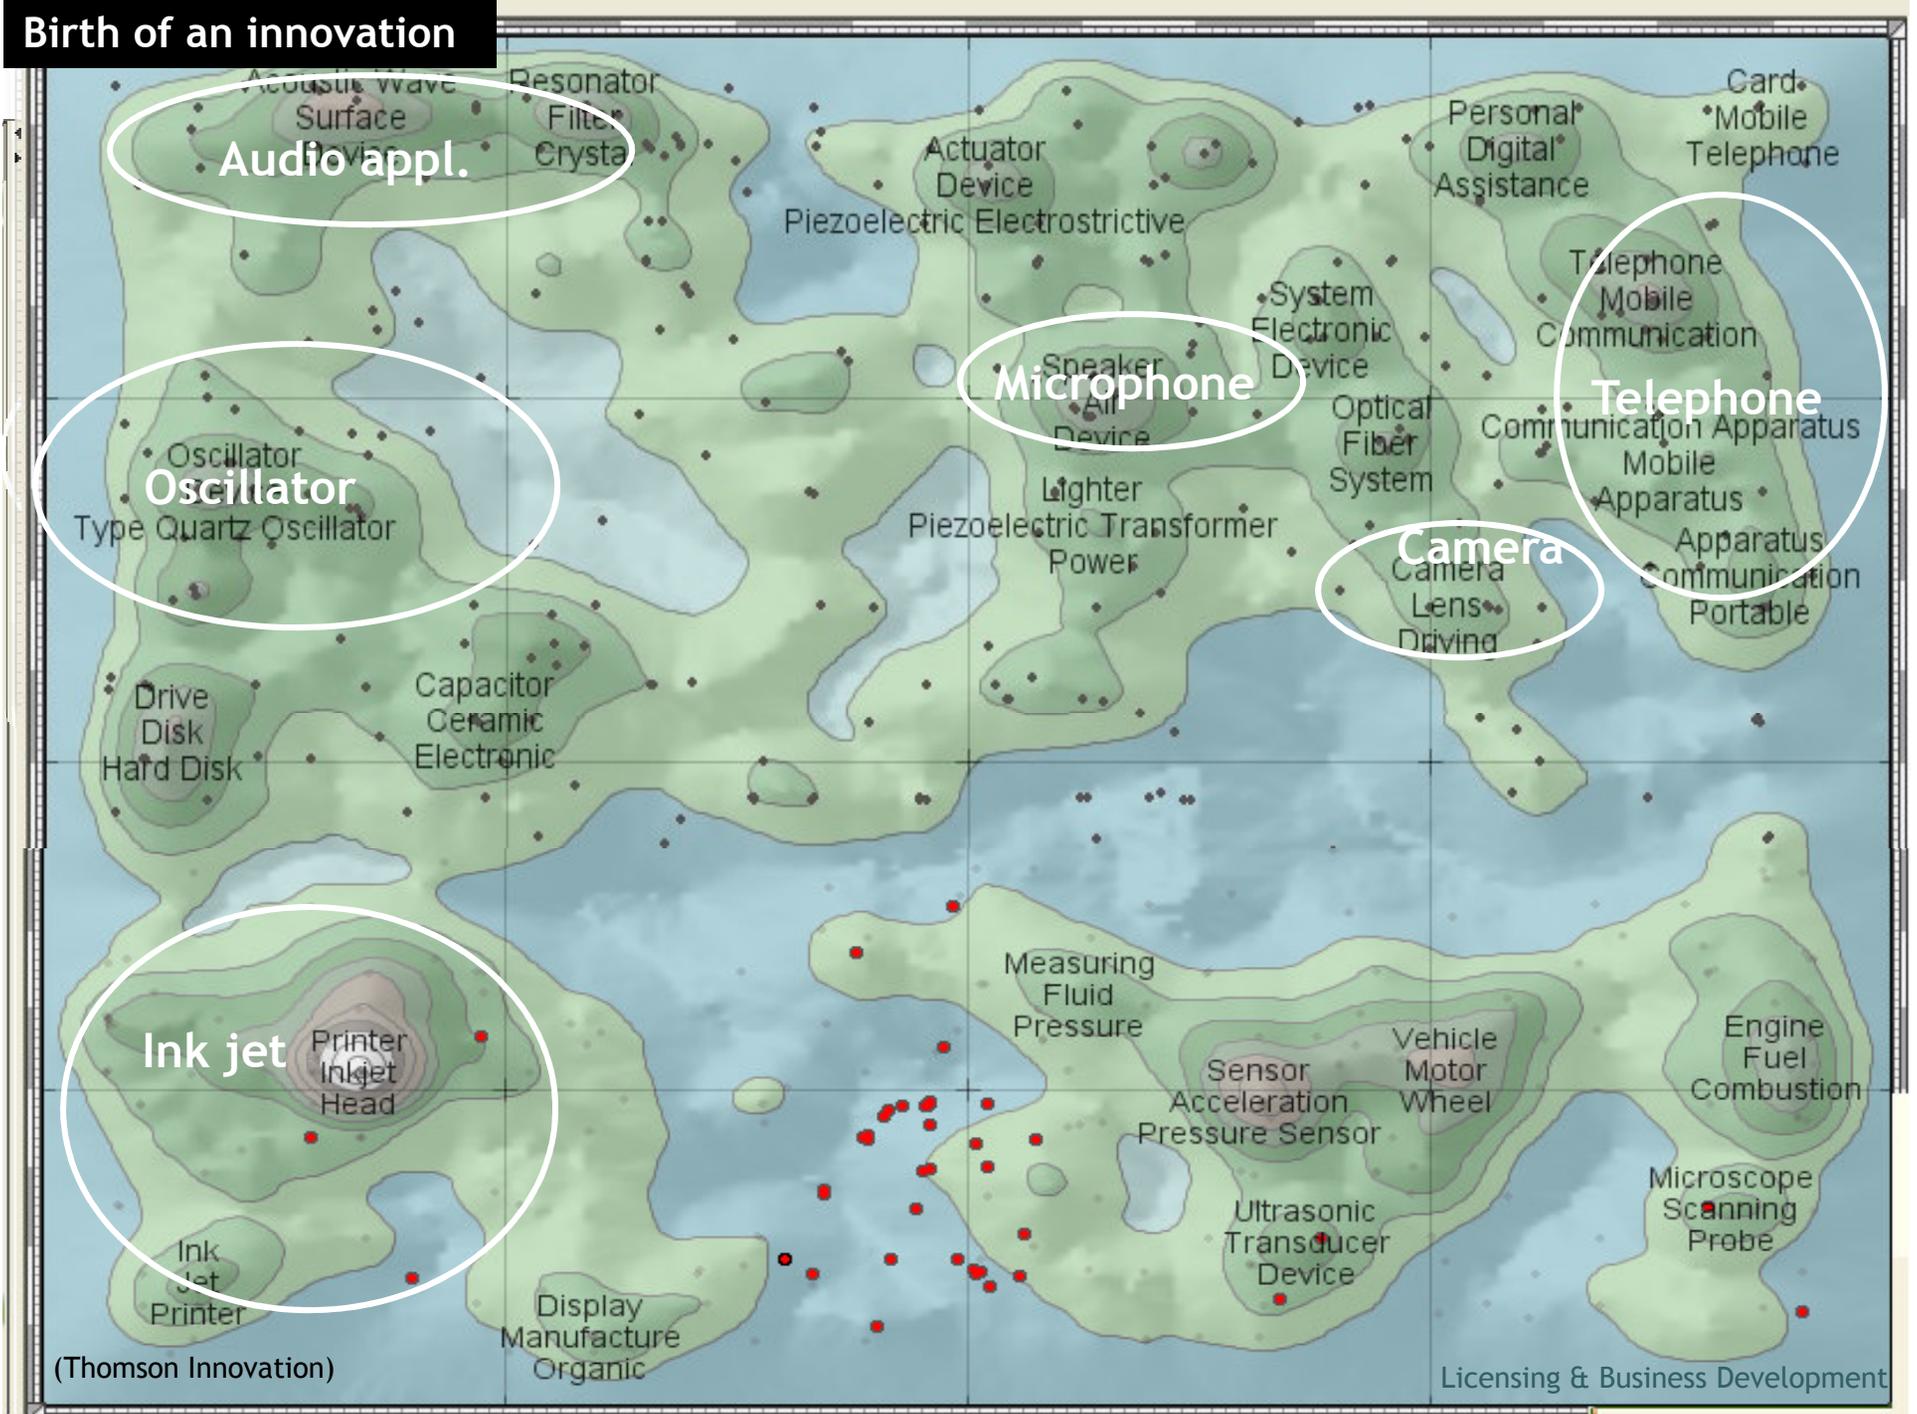

(Thomson Innovation)

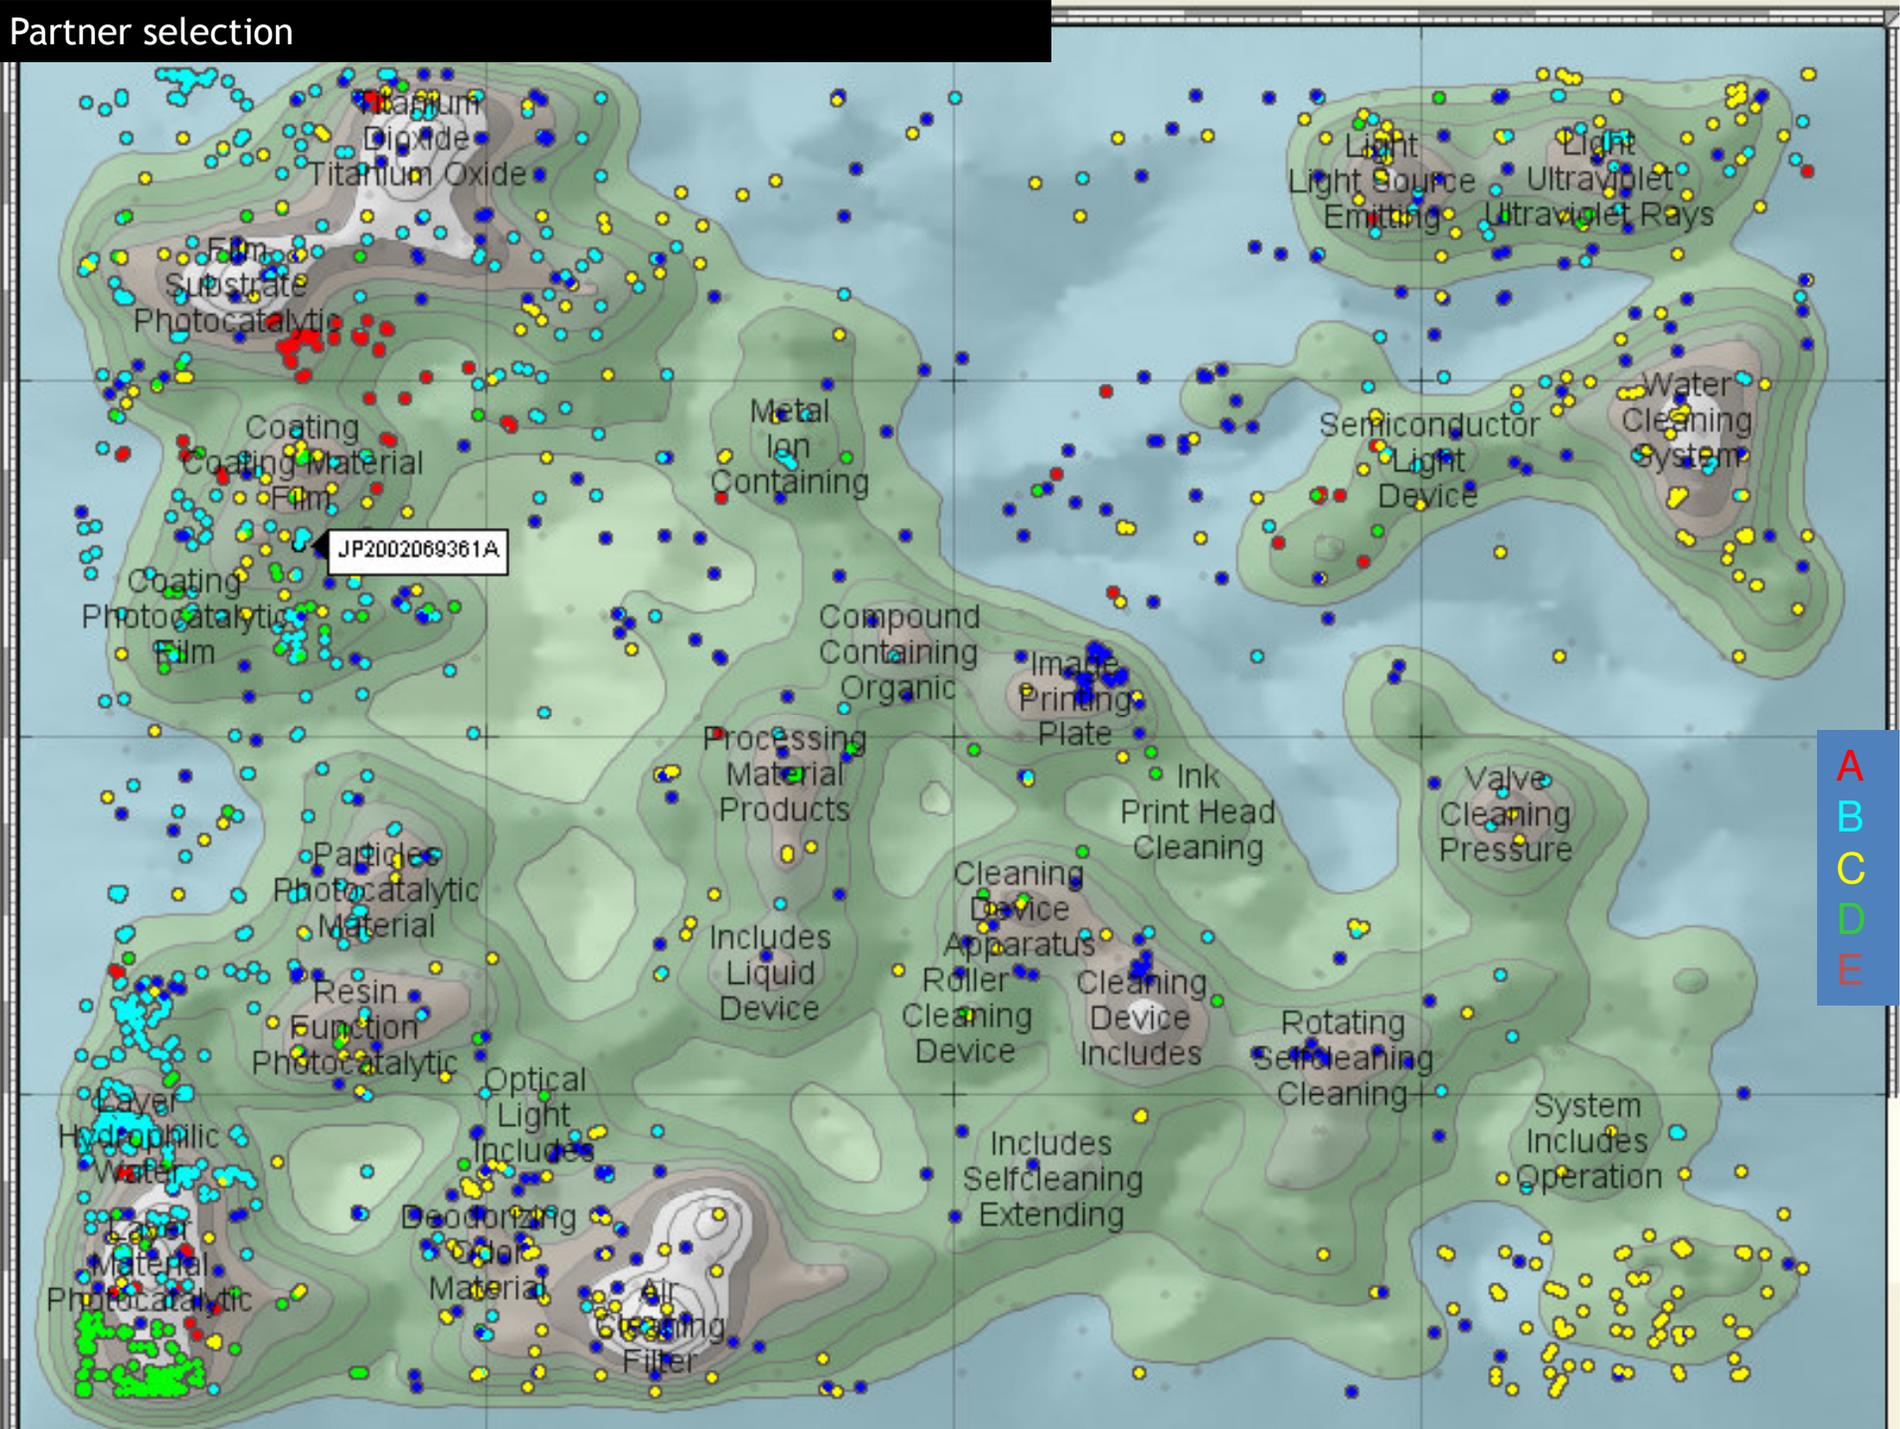

Research field shifts

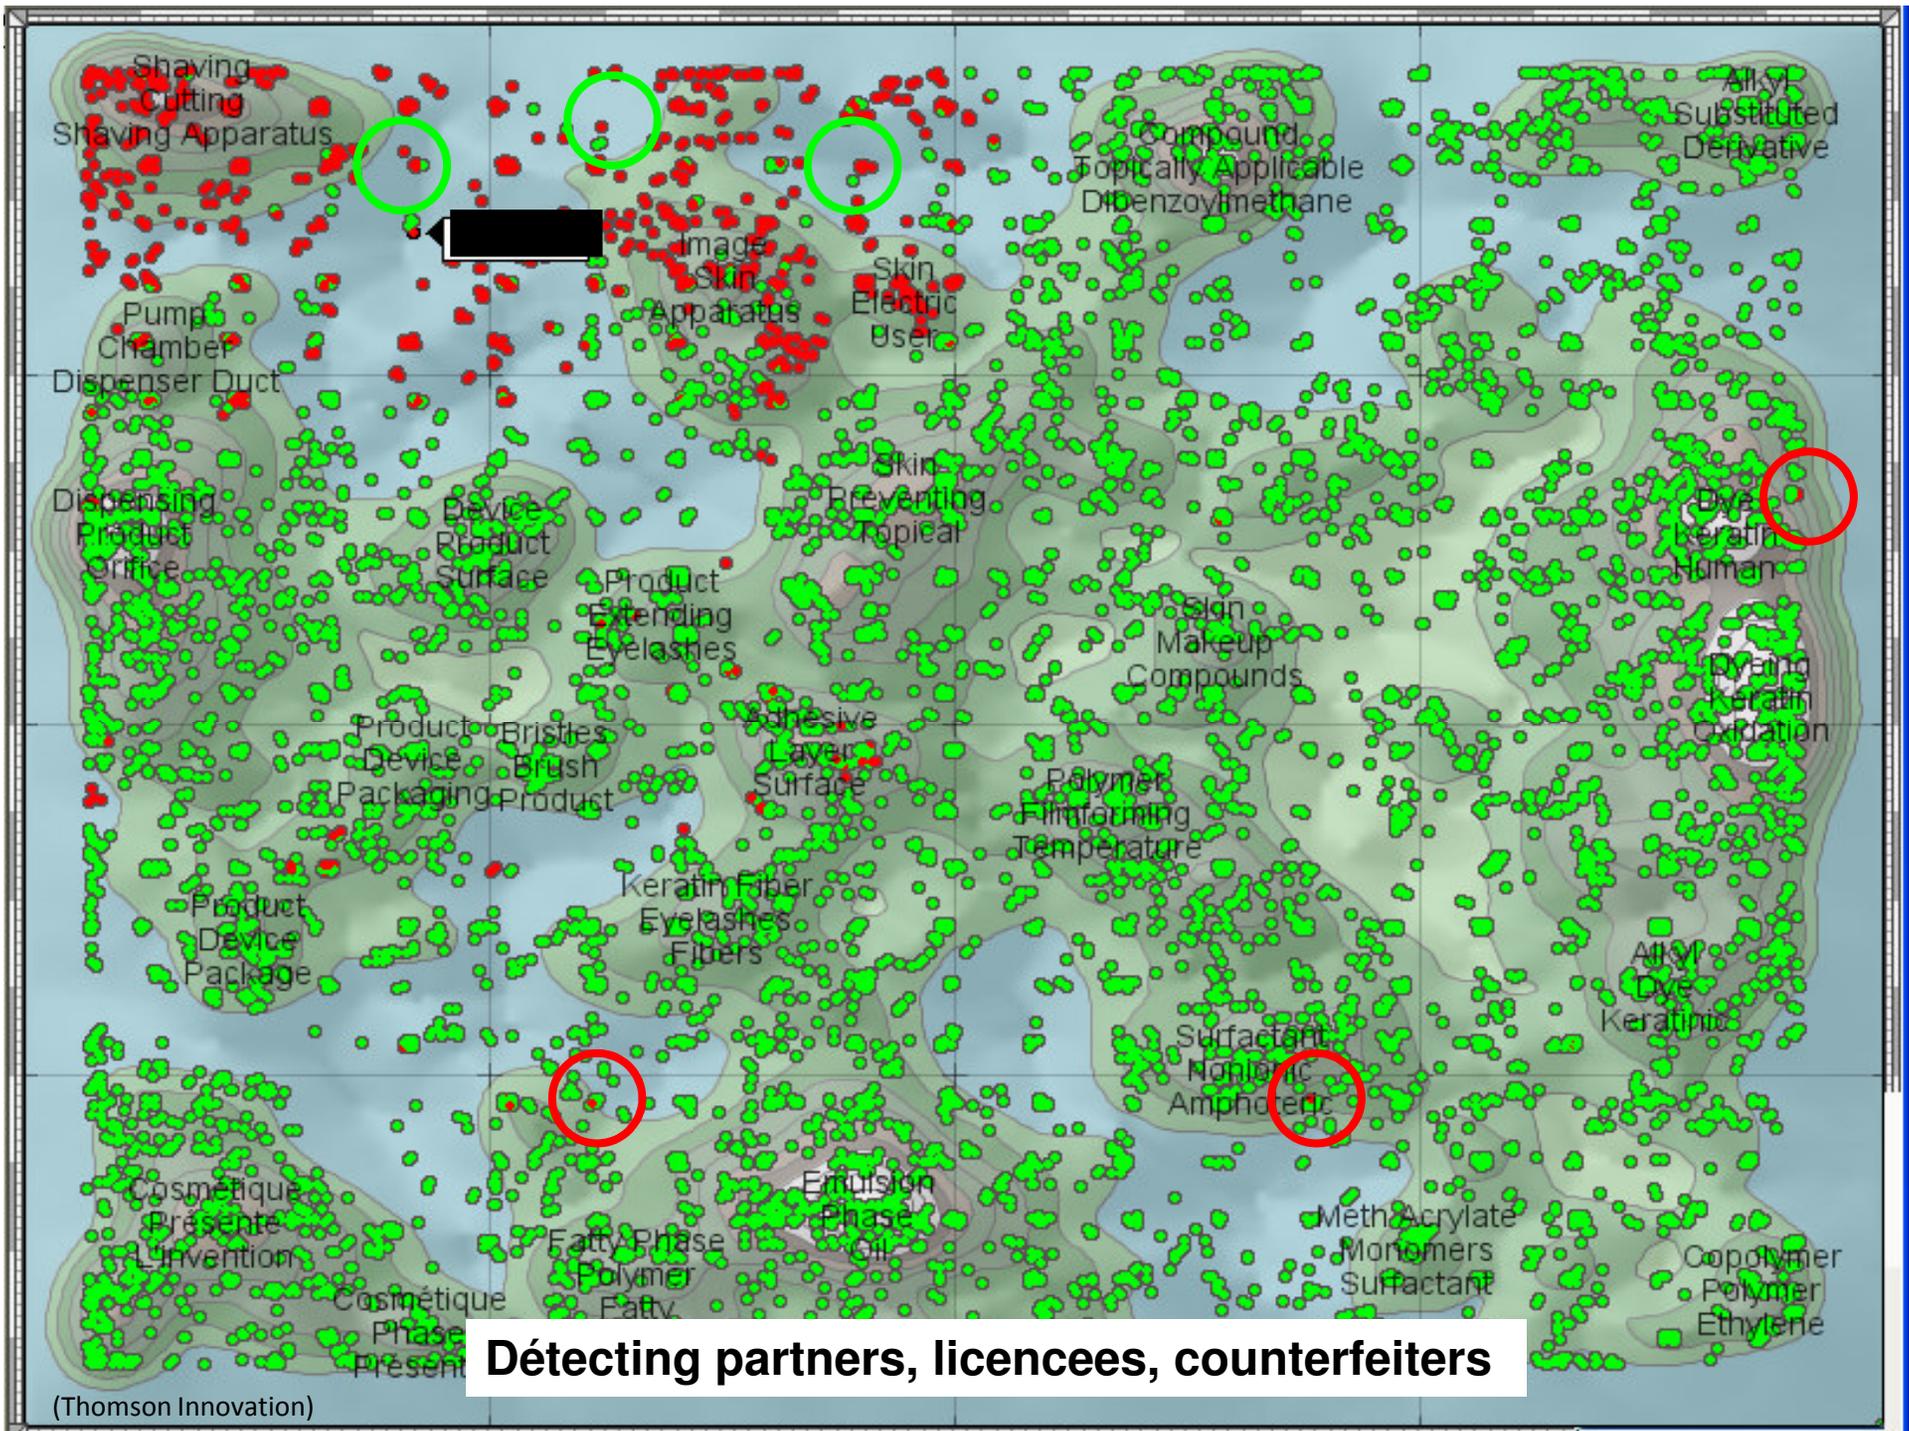

Birth of an innovation

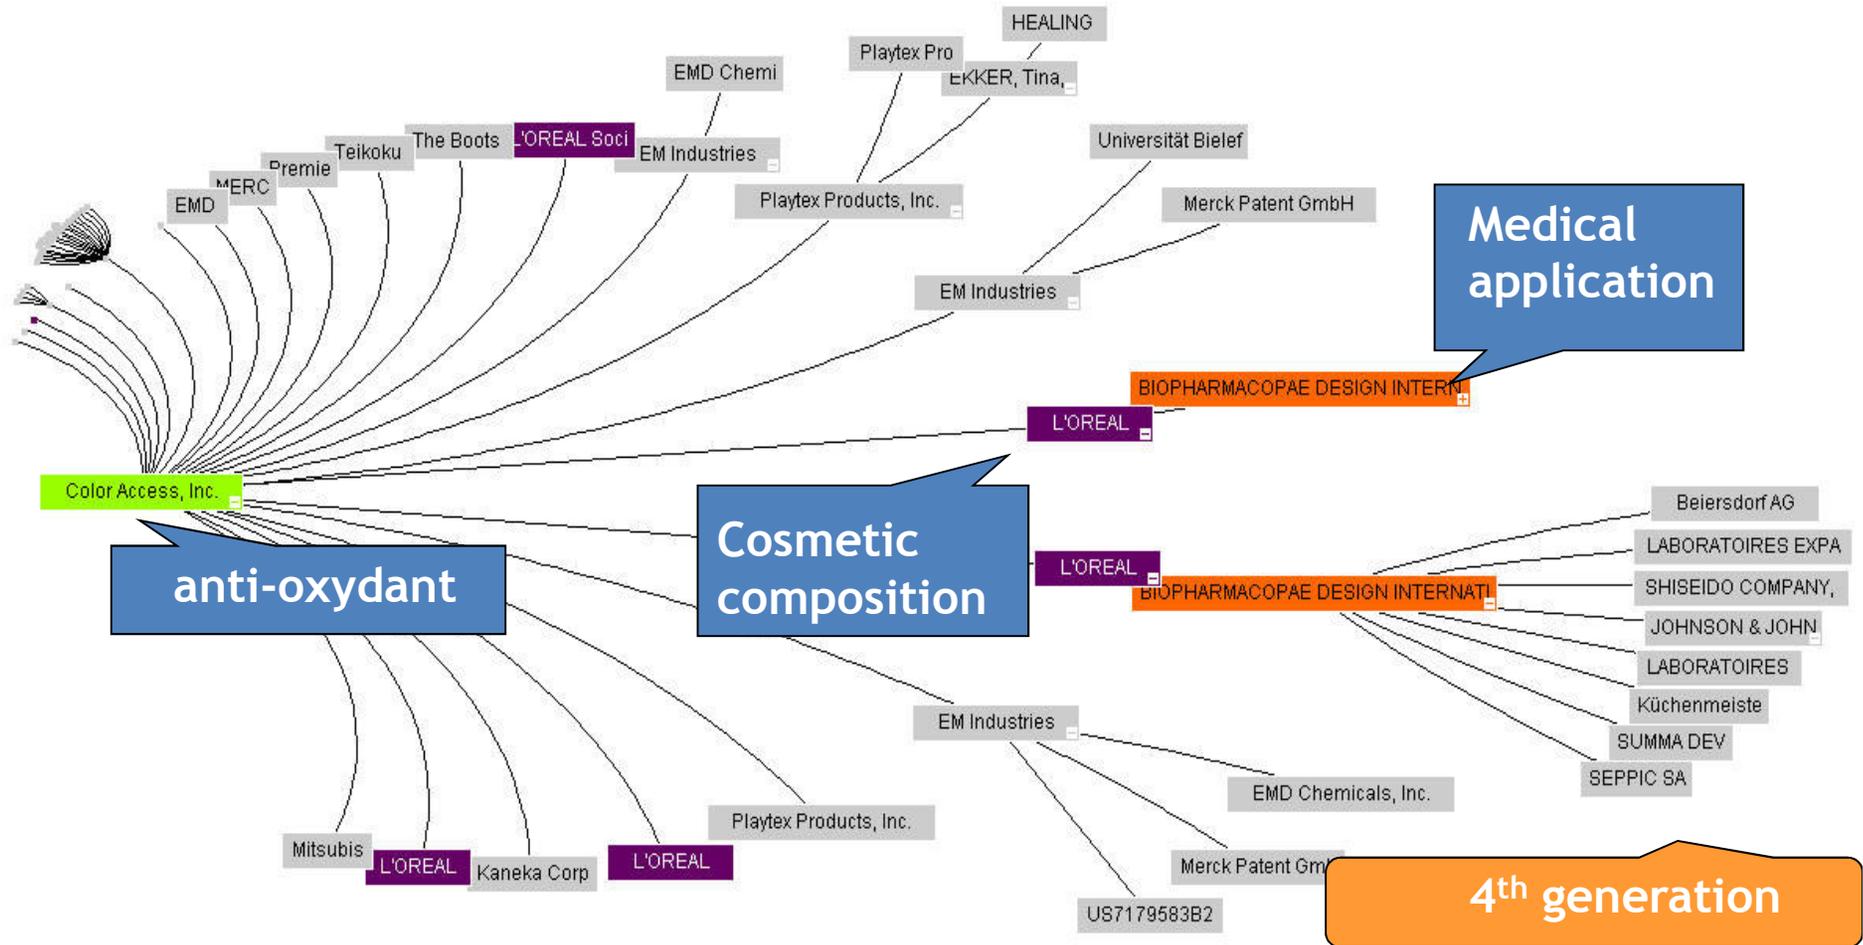

Partner selection

- A
- B
- C
- D
- E

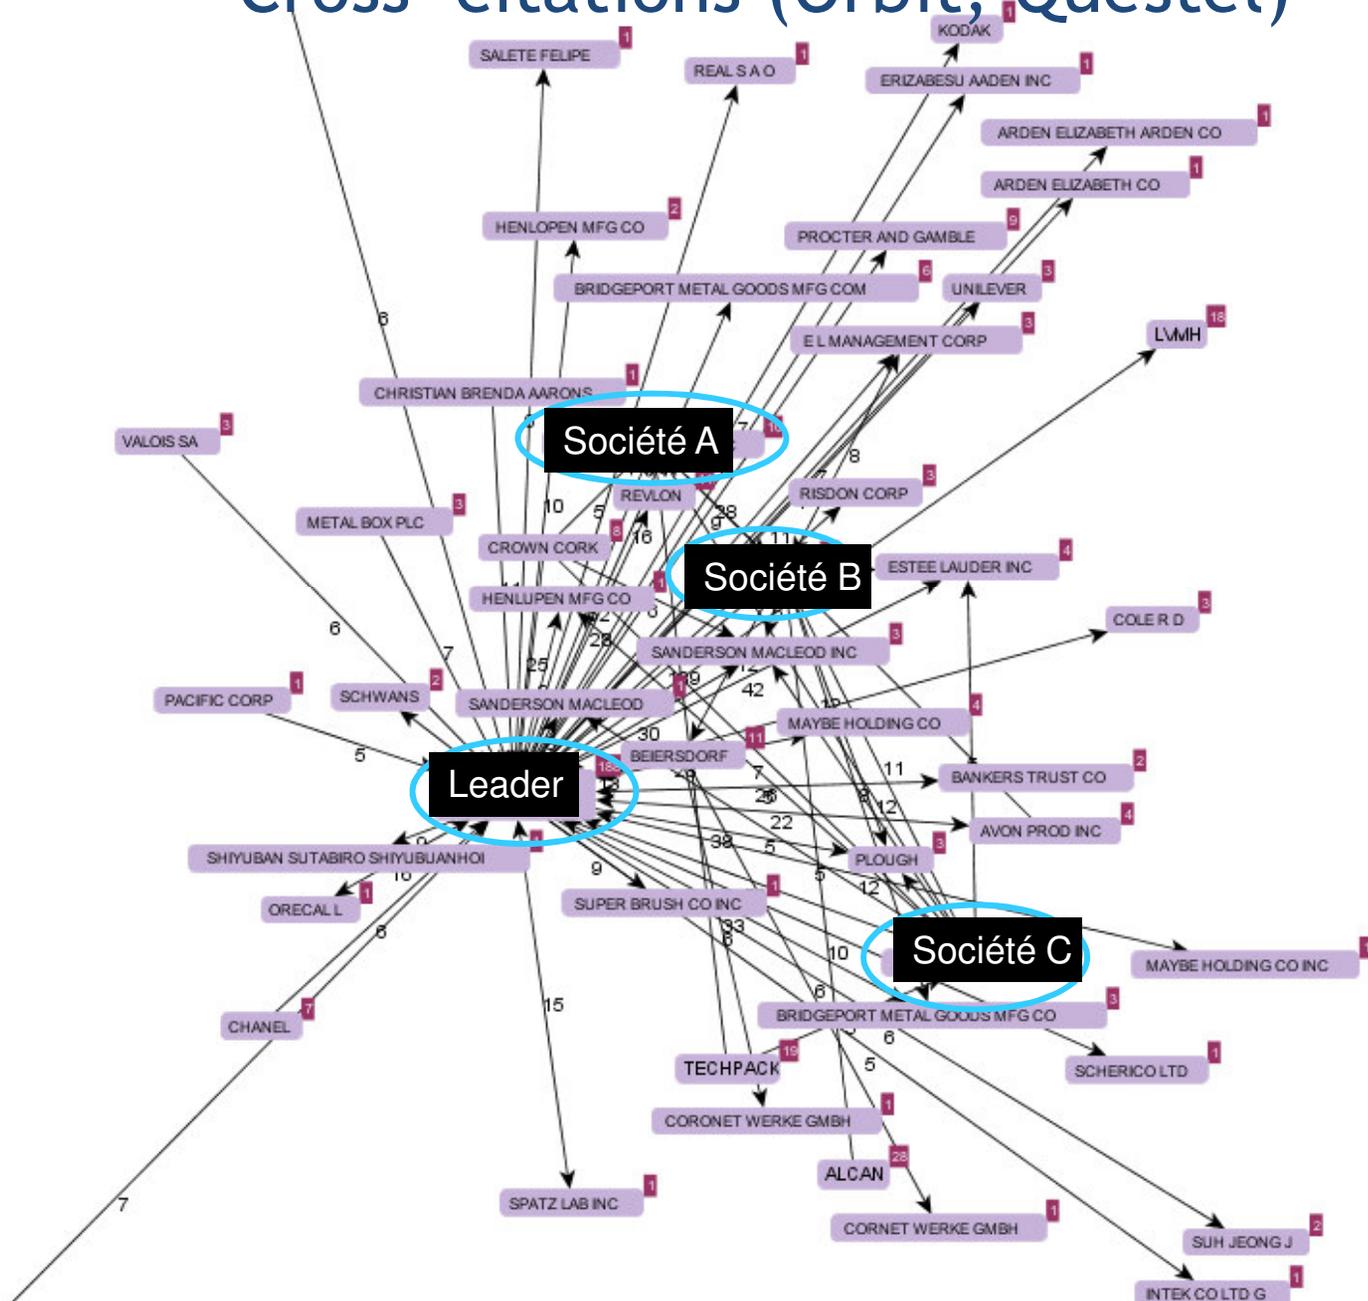

Detecting partners

Calculating predictive indices

- Forward citations per family of patent
(technological impact of inventions)
- Generality index (forward citations)
(widespread impact as patent influenced subsequent innovation in a variety of fields)
- Originality index (backward citations)
(citing patent in a wide range of fields)
- Acceleration coefficient
- Company patent signature
- Citation analysis among competitors

Cross citations (Orbit, Questel)

Detecting business strategies based on patents

- Innovation navigation tools
 - Patent environment prior to R&D investment
 - Breakthrough identification prior to launch
 - Global analysis of competitors & key players
 - Geographical R&D comparisons
 - R&D domains comparisons
 - Patents to be acquired or licenced (Monopoly)
 - Much more Transparency
 - Combined with rating analysis
-  Opportunity +++ for early adopters

Thank you for attention !
